

My CV

Kona Keawekane

Student of BYU-Idaho, Programmer

`konakeawekane@gmail.com`

About Me

I am a student currently enrolled in BYU-Idaho studying computer science. I love cars, RC, sports, and computer programming, however most important to me is the gospel of Jesus Christ and my family. I have come to appreciate the growth and development of computing technology over the years and have grown a personal drive to continue innovating on what can be done with computers. I constantly seek to do things that have never been done before and improve upon the status quo. In several of my own projects I have taken an iterative approach to consistently improve and build better and more capable programs.

Experience

- Full-Time Missionary
 - (The Church of Jesus Christ of Latter-Day Saints)
- Eagle Scout
 - (Boy Scouts of America)

Skills

- Computer Programming
 - (Javascript, python, rust, HTML, CSS, C#)
- 3D modeling
 - (blender)
- Game Development
 - (Unreal Engine 4-5, Unity, Godot, Flax)

Projects

- Stochastic Viewspace Global Illumination
 - (Inspired by this paper: <https://dl.acm.org/doi/10.1145/3451268>)
 - <https://konakeawekane.github.io/Stochastic-Cubemap-Global-Illumination>
- Clay 3D
 - (A web based 3D game engine with documentation built mostly with Google's Gemini 3 pro)
 - <https://konakeawekane.github.io/Clay-3D/>
- Web Audio Spatialization Renderer
 - (Tool for modeling Acoustic effects of 3D environments on sound files)
 - <https://konakeawekane.github.io/Audio-Spatialization-Renderer/>
- Custom extensions for the scratch editor
 - (Integration for compute shaders, Integration for Web Audio API)
 - <https://github.com/konakeawekane/scratch-extensions>
- Dream Car
 - (Small web game emphasizing creativity and limitless creation)
 - <https://github.com/konakeawekane/Dream-Car>
- Rust CPU 3D Graphics
 - (current educational project)
 - https://github.com/konakeawekane/my_engine
